

Behavioral Health-Primary Care Integration Learning Collaborative Data Exchange Workgroup

Mary Talen, Erie Family Health Center

Marvin Lindsey, CBHA

Data Exchange Workgroup: The Challenge

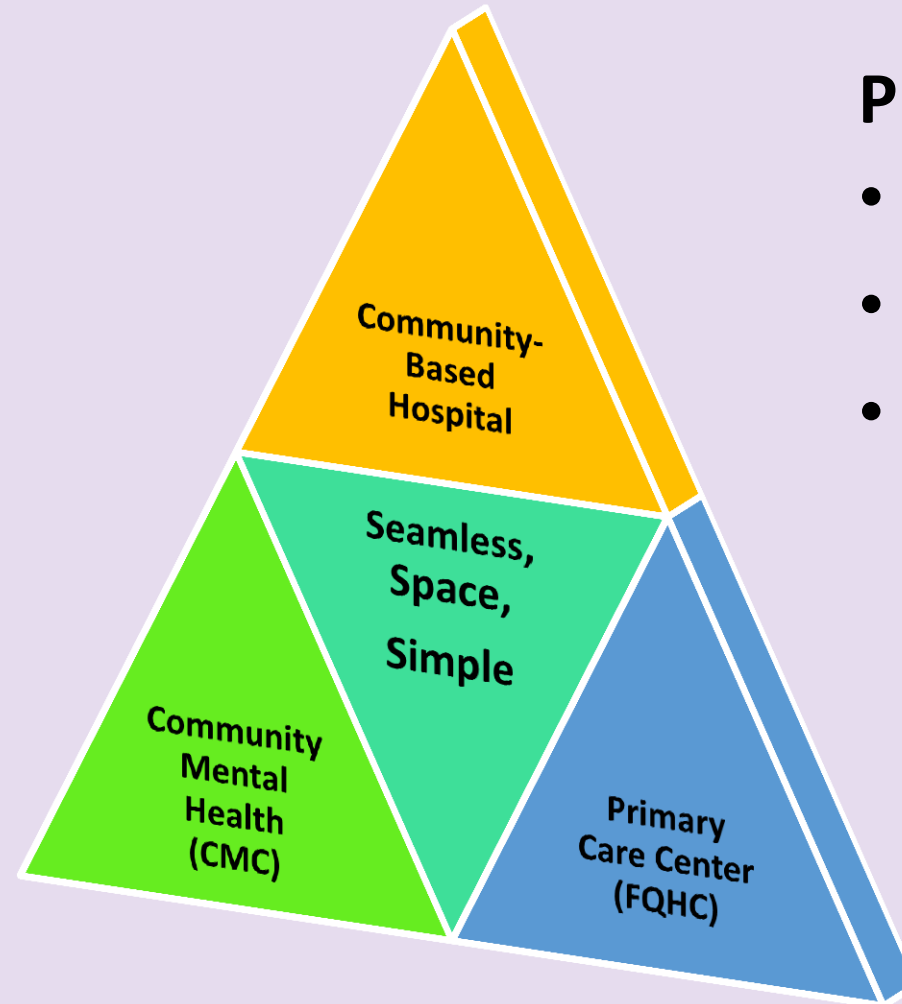

- Incompatibility of data systems
- Confidentiality vs Patient Safety
- Confusion over purpose and goals of data exchange
- Too much data vs too little data
- High tech vs. low tech options

Key Elements of Integrated Care Data Exchange:

Partners

- Community-based Hospital
- Primary Care (FQHC)
- Community Mental Health

Principles

- Seamless
- Space
- Simple

The Core: 3 S's

- Seamless: Clients/Patients should experience smooth shifting of gears from one healthcare partner to the next
- Space: Data exchange has purpose and meaning when there are co-located spaces and personal interchange
- Simple: The integration needs to be simple for patients to manage even if the glue that holds things together is complex
